

Cosentino proudly partners with Witchcliffe Ecovillage

For your sustainable benchtop solutions

At **Cosentino** our main focus and drive is to manufacture surface solutions that are both sustainable and safe. **Silestone Loft Series** is our engineered stone with an Environmental difference. We have produced this material using our **HybriQ Technology**. By using 100% Renewable Energy, utilising both Solar and Wind power from our own property in Almeria Spain. We also recycle 98% of the water used to produce our stone products and use over 20% recycled minerals within the material.

Silestone Loft Series has been manufactured with a reduced Quartz content. This allows our engineered stone to have a lowered crystalline silica content. Making it a much safer product for our stone masons to work with.

For **Ecovillage clients**, we are offering our Silestone Loft Series at a **special discounted rate**. Please contact your builder or stone mason for a quote.
